

Adnan Baig

Full-Stack Engineer | Browser Automation & AI-Assisted Development

Chiang Mai, Thailand | Open to remote engineering roles

adnanbaigofficial@gmail.com | Portfolio | GitHub / CodnanBaig | LinkedIn / Adnan Baig

Full-stack engineer with professional development experience since 2021, grounded in React, Next.js and TypeScript. Builds browser debugging tools and data-backed applications with Node.js and PostgreSQL, plus project-based Python/FastAPI experience. Uses AI coding tools to accelerate implementation while reviewing changes, debugging across layers and validating behavior through automated tests.

PROFESSIONAL EXPERIENCE

Kenmark ITan Solutions | Frontend Developer

October 2021 - Present

- Develop responsive React and Angular applications, reusable components, dashboards and forms; clarify requirements with product and design stakeholders.
- Integrate REST APIs and investigate authentication, CORS, routing and data-flow defects across browser and service boundaries.
- Support builds, hosting and environment troubleshooting across Next.js/Vite, Vercel, Netlify, PM2 and DNS.

SELECTED PROJECTS

ReproLab / Browser debugging & regression-test tooling

Case study

TypeScript, Node.js, SQLite, libSQL, Playwright

- Built a framework-independent browser recorder capturing masked interactions, errors and fetch/XHR metadata for timeline-based debugging.
- Implemented owner-scoped SQL persistence, upload deduplication and deterministic Playwright test drafts; added API/security and browser regression checks.

Don't Go Broke / Data-backed personal finance application

Case study

React, Next.js, TypeScript, Supabase, PostgreSQL, Capacitor

- Built a finance app with Supabase authentication and row-level ownership controls, ledger-derived balances and recurring-bill reserves.
- Implemented transactional JSON restore with validation and rollback; added financial-logic, database-isolation and browser-journey tests.

SignalForge / Python API & AI-assisted research simulator

Case study

Python, FastAPI, React, TypeScript, SQLite, Docker

- Built Python/FastAPI APIs and a React dashboard around a persistent SQLite paper-trading ledger and bounded LLM proposals; no real orders.
- Separated model output from execution validation; tested stale data, duplicate requests and API/browser flows with external-provider fixtures.

Mart Fight / A personal game about school and friendship

Case study

TypeScript, Phaser, Vite, Vitest, Playwright

- Created a browser fighting game from my attachment to school; planning fighters based on actual school friends so we can eventually face off as ourselves.

TECHNICAL SKILLS

Frontend: TypeScript, JavaScript, React, Next.js, Angular, HTML, CSS, Tailwind CSS

APIs & data: Node.js, HTTP/REST, SQL, PostgreSQL, Supabase, SQLite; Python/FastAPI (projects)

Quality & delivery: Playwright browser automation, Vitest, GitHub Actions, Git, Vercel, Netlify

AI-assisted workflow: Cursor, Claude, reviewed code changes, regression tests; LLM APIs / OpenRouter

EDUCATION & TRAINING

Masai School | Full Stack Web Development Program

Nine-month program covering JavaScript, React, Node.js, Express, MongoDB, and data structures and algorithms.
