

Adnan Baig

Full-Stack Engineer | AI-Assisted Development

Chiang Mai, Thailand | Open to remote engineering roles

adnanbaigofficial@gmail.com | Portfolio | GitHub / CodnanBaig | LinkedIn / Adnan Baig

Full-stack engineer with professional development experience since 2021 and a frontend foundation in React, Next.js and Angular. Builds web applications, developer tools and mobile-first products using TypeScript, Node.js and SQL-backed data. Validates AI-assisted implementation through code review, automated tests and reproducible checks.

PROFESSIONAL EXPERIENCE

Kenmark ITan Solutions | Frontend Developer

October 2021 - Present

- Develop responsive React and Angular applications with reusable components, dashboards and forms, working with product and design teams to clarify requirements.
- Integrate REST APIs and troubleshoot authentication, CORS, routing and data-flow issues across frontend and service boundaries.
- Support builds, hosting and environment configuration across Next.js/Vite, Vercel, Netlify, PM2 and DNS.

SELECTED PROJECTS

Don't Go Broke / Personal finance application

Live | GitHub (private)

Next.js, TypeScript, Supabase, PostgreSQL, Capacitor

- Built a Next.js/Capacitor finance app with ledger-derived balances, recurring-bill reserves and history-qualified spending projections.
- Implemented ownership-scoped Supabase data, one-base-currency checks and transactional JSON restoration that rolls back invalid imports.

ReproLab / Browser debugging workbench

Live | GitHub (private)

TypeScript, Node.js, SQLite, libSQL, Playwright

- Built a browser recorder and debugging workbench capturing masked interactions, errors and network metadata for timeline-based investigation.
- Implemented owner-scoped SQLite persistence, duplicate-upload protection and deterministic Playwright regression-test draft generation.

dev-clean / Workspace cleanup CLI

GitHub

Node.js, JavaScript, TypeScript, GitHub Actions

- Developed a CLI for JavaScript, Python and Rust workspaces with expiring plans, stale-target validation, reversible quarantine and restore.
- Added operation journals, recovery and Git-tracked-file safeguards, with disposable-fixture tests and Linux/macOS/Windows CI.

Mart Fight / A personal game about school and friendship

Play | GitHub (private)

TypeScript, Phaser, Vite, Vitest, Playwright

- Built a playable browser fighting-game prototype inspired by my school and friendships, with keyboard/touch controls and automated game checks.
- Developing toward recognizable fighters based on actual school friends; the full friend roster and online multiplayer remain future goals.

TECHNICAL SKILLS

Languages & UI: TypeScript, JavaScript, React, Next.js, Angular, HTML, CSS, Tailwind CSS

Backend & data: Node.js, REST APIs, PostgreSQL, Supabase, SQLite, Prisma, MongoDB

Quality & delivery: Vitest, Playwright, GitHub Actions, Git, Vercel, Netlify, Capacitor

AI-assisted workflow: Cursor, Claude; project experience with LLM APIs and OpenRouter

EDUCATION & TRAINING

Masai School | Full Stack Web Development Program

Nine-month program covering JavaScript, React, Node.js, Express, MongoDB, and data structures and algorithms.
